## Relion ultima test strips ebay

I have always had the luxury of health insurance and I'm eternally grateful for that, but many times when I read comments left on blogs, my heart aches for those people who suffer the burden of paying for their diabetes supplies out of pocket.I will admit the feeling of being covered is worth every penny.David's recent blog focused on a new meter and many of the comments that were left asked how to pay for test strips. Blood sugar testing is the most important factor in taking action against diabetes complications!That said, I thought I would do a little market research for where to find the cheapest test strips on the Internet and in local stores. Using my One Touch Ultra Mini as the model for comparison, and Consumer Reports to compare accuracy and dependability factors, I sat at my computer for 4 days looking up cheap test strips. Let's just say that I had no idea what I was getting into, but I felt sick with what I saw as marketing for "cheap" test strips, as many were anything but cheap.Just for your information, Consumer Reports Health ratings for most accurate, consistent and easy to use meters, 1= most favored, 10 = least favored by CR standards:One Touch Ultra Mini: \$1.14Ascensia Contour: \$1.10One Touch Ultra2: \$1.14ReliOn Ultima (WalMart) \*CR ranked as best buy: \$0.44One Touch UltraSmart: \$1.14Nova Max: \$0.96Freestyle Lite: \$1.30Accu-Chek Aviva: \$1.10Freestyle Freedom: \$1.30Duo-Care - blood glucose/blood pressure: \$0.90Ascensia Breeze 2: \$1.10True Track (drugstore chain label): \$0.60Since we know accuracy is under scrutiny, I think it best to rely on your own feelings for what works best for you!Of the twenty sites I browsed, Amazon.com had the cheapest test strips for most meters and meter prices were lower as well. My local Rite Aid pharmacy could not compete. A box of One Touch 50 ct strips was \$58.99.Amazon.com:One Touch Ultra 50 Ct-\$24.00One Touch Ultra Mini Blood Glucose Monitor ran about \$11.00-\$16.00I have an Amazon Prime account, which is an added charge at the beginning of the year. With that, I get free shipping on all items. I generally order enough stuff from Amazon that it was worth the cost! You may want to consider your diabetes costs and shipping charges, but from just a strip cost, this was by far the best deal I could find.WalMart:One Touch Test Strips 50ct were \$57.23...BUT their ReliOn meter was a deal to consider:ReliOn Ultra thin was a \$9.00 investment for the meter, and ReliOn 50 ct test strips for \$20.00, Walgreen had the same deal as Walmart, but the strips were more expensive. Walgreen True Go for \$9.00, and their test strips 50 ct \$39.99.eBay had One Touch Ultra Blood Glucose Test strips 50 ct for \$22.50. Another 50ct was \$5.28. You do have to realize you are bidding and the price may go up. But a deal probably can be found on eBay if you are patient.Some places I shopped online:This site lists whose selling what and for what price. I did not find any real bargains.It is important to throw out your meter after about a year to maintain consistency. I realize consistency has been under scrutiny, but that doesn't mean, "don't test!" And, since we are stuck until the pharmaceuticals can fix the accuracy of meters, we need to replace them at least once a year if not more.I have been married to the One Touch because of my [Medtronic pump], but now I'm on my pump vacation and I see Dr. Huang in a couple of weeks. I like the [Freestyle Lite] with the backlight and a test strip port lite. Could have used that at the movies tonight! And for those nighttime tests when I need them, which are not that often, this would be extremely useful! If you know more deals out there please share! FDA Says Faulty Strips Could Give Diabetes Patients Inaccurate Reading of Glucose Levels Medically Reviewed by Laura J. Martin, MD on December 22, 2010 Dec. 22, 2010 -- The FDA says it is working with Abbott Diabetes Care to recall 359 million defective glucose test strips -- sold under a variety of brand names -- that may make blood glucose levels look lower than they really are.The FDA says the defective strips "can lead users to try to raise their blood glucose when it is unnecessary or to fail to treat elevated blood glucose due to a falsely low reading," and that "both scenarios pose health risks."About 24 million Americans have diabetes.Abbott says the defective strips aren't absorbing enough blood to provide an accurate reading. The company also says test strips stored for a long time in medicine cabinets or test strips that have been exposed to warm temperatures could give false results."FDA and Abbott are reviewing the cause of the manufacturing defect to avoid this problem in the future," Alberto Gutierrez, PhD, of FDA's Center for Devices and Radiological Health, says in a news release.Gutierrez says diabetes patients "should be aware of the recalled glucose test strips and take steps to prevent them from affecting their health."The strips being recalled are used with Abbott's MediSense Optium, Precision Xceed Pro, Precision Xtra, Optium, Optium EZ, and ReliOn Ultima blood glucose monitoring systems.The lots were manufactured between January and May of this year and sold in retail stores in the U.S. and Puerto Rico. The strips are used both by consumers and health care professionals.Abbott says the strips should not be used and will be replaced at no cost to consumers.It says the monitoring systems themselves are not being recalled, just the defective strips.Patients should contact their health care providers to determine testing options if they don't have any unaffected test strips to use.The FDA says it is working with Abbott to avoid any potential shortages of useable products. The company says it will take about eight weeks to produce and distribute enough strips to replace all the defective ones that have been distributed. The FDA also says people with diabetes who want to find out if they have products that need to be returned should call Abbott Diabetes Care at 800-448-5234 for English speakers and at 800-709-7010 for Spanish speakers. The FDA says people wishing to look up test strip lot numbers should visit the web site www.precisionoptiuminfo.com.In addition, consumers should report serious adverse side effects to the FDA by phone at 800-332-1088, fax at 800-FDA-0178, online at www.fda.gov/MedWatch/report.htm, or via regular mail at www.fda.gov/MedWatc/getforms.htm, where pre-addressed forms may be obtained.Here's what the FDA says people who purchased the test strips should do:For people who purchased test strips in retail stores or online, the FDA recommends:Calling Abbott for a replacement of the affected strips. Abbott will send you unaffected Precision Xtra, Optium, OptiumEZ, and ReliOn Ultima Blood Glucose Test Strips at no charge.While waiting for the replacement strips to arrive, use an alternate method to measure blood glucose (such as a different test system) or purchase at least two weeks' worth of new, unaffected strips while waiting for replacement strips.If you purchase Precision Xtra, Optium, OptiumEZ, and ReliOn Ultima Blood Glucose Test Strips in a store or online, check to be sure these are from unaffected lots. Ask a pharmacist to help you.If the only test strips available to you are from affected lots, do not stop testing your blood glucose.But do take the following two precautions to reduce the chance of erroneous reading:Check the amount of time it takes for your blood glucose meter to start the "countdown" after you first apply blood to the test strip. Start timing immediately after blood first makes contact with the test strip. If your meter takes longer than five (5) seconds to start the countdown, test strip is defective and the result should not be used. Check the time for each test strip you use because all of the strips in a package may not be affected to the same degree.If any reading from a strip appears lower than you would expect or does not seem to match the way you are feeling, you should contact your health care provider. Pay special attention to signs and symptoms of high blood sugar (hyperglycemia) and low blood sugar (hypoglycemia):Symptoms of high blood sugar include excessive thirst, excessive urination, blurred vision, weakness, nausea, vomiting, and abdominal pain. If you are experiencing any of these symptoms or are not feeling well, contact your health care provider immediately.Symptoms of low blood sugar may include trembling, excessive sweating, weakness, hunger, confusion, and headache. Some people may have no symptoms at all before they develop unconsciousness or seizures. It is important to treat low blood sugars promptly to avoid loss of consciousness or a seizure. If you are unable to obtain unaffected strips, you should contact your health care provider for advice on how to treat these symptoms before they occur. © 2010 WebMD, LLC. All rights reserved.
